

Quality class and dimensions

Our natural stone products are a result of millions of years evolution and we always strive to excavate the blocks as gentle as possible. Being a natural product, variation in colour, shape and structure may vary and it should be seen as the proof for a natural product compare to artificial ones. Occasionally some deviations which might lead to a block being more difficult to work with may occur.

We base our pricelist on an assessment of each block where we classify it to certain factors. The factors also take in consideration any deviation which could have an impact on the production of the finished natural stone product.

Quality class	Description	Pricing model
Dressed blocks	Dressed blocks shaped in cubic and rectangular form divided into three classes	Block sold in SEK/m³ based on the minimum area which can be cut in each direction
1st Choice.	The top quality for the most demanding products especially with polished surfaces. it will be possible to produce polished slabs and finished products of 100 % of the measured block. It is suitable for demanding application such as gravestones and large monuments, also for premium building and construction products as countertops, flooring or facades. The block should have a colour typical of the quarry and be free from veins, colour spots and cracks.	
2nd Choice	A premium quality for High-End building and monument products. The customer should be able to produce polished slabs for gravestones or countertops, 75% of measured block shall be free from any defects. Depending of required surface, the block may be used without waste. It may contain small deviations like: crack (in the corner or cutting direction) marked in the quarry, vein, spots, colour variation etc. No other cracks are allowed.	
4th Choice and 4th Choice Selected	The block is suitable for many different surfaces and often used for building products both indoor and outdoor such as stairs, window sills, tiles, floors etc. The customer should be able to use at least 30-40% of the measured blocks to produce polished slabs for gravestones, monuments and countertops. The 3 rd Choice Selected features less variations.
